

Support cancer care through patient outcomes data

Patient-Reported Outcomes and Oncology

While cancer cases are projected to double by 2040, long-term survivability has increasingly become the norm, compounding the value of patient insights in clinical decision making. PatientIQ automates the collection of longitudinal patient-reported outcomes data, such as symptoms and quality of life, to empower providers with a streamlined way of incorporating patient experiences into clinical decision-making.

Breast cancer

Melanoma

Leukemia

Lymphoma

Lung Cancer

Prostate Cancer

Bladder

Enhance data-driven cancer care through the collection and analysis of patient outcomes data

The PatientIQ platform automates the collection of PROs in a workflow optimized for the in-demand healthcare provider. We intelligently identify predictors of clinical outcomes and empower healthcare providers with unprecedented analytical insights. Clinicians can use PatientIQ's standard oncology pathways, augment them to better meet their unique goals, or seamlessly build their own custom pathways to optimize care delivery.

Automate collection

Streamline analysis

One platform, engineered for excellence

Scalable integrations

The PatientIQ platform integrates with all major EHR vendors to scale across organizations and enhance efficiency.

Enterprise-grade security

The PatientIQ platform complies with healthcare regulations and industry standards through advanced security controls.

Advanced analytics

The PatientIQ platform includes the most advanced biostatistical analytics engine on the market. With PatientIQ, you can automate patient benchmarking, predictive modeling, and data visualizations.

Industry collaboration

The PatientIQ platform serves as a collaborative for healthcare organizations to participate in registries, conduct research, and work together to push medicine forward.
